DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 24 March 2009 has been entered.

Allowable Subject Matter

2. Claims 1, 3, and 5-7 are allowed.
3. The following is an examiner's statement of reasons for allowance: Regarding independent claim 1, the prior art of record neither shows or suggests a multi-typed plasma display panel comprising, in addition to other limitations of the claim, at least one second barrier rib formed along a cross-section inside of a seal line in order to prevent sealant of the seal line from penetrating into the inside of the first unit plasma display panel, wherein the second barrier rib is extended to the edge of a plurality of first barrier ribs and formed perpendicular to the edge.
4. The closest prior art of Nakano (US 6,414,434) to independent claim 1 teaches, in Figure 1, plasma display panel with a front substrate (1); a rear substrate (3) sealed with the front substrate; a plurality of first barrier ribs (6) formed on the rear substrate, the plurality of first barrier ribs dividing a display area (9) into display cells (7); and at least one second barrier rib (11). However, Nakano fails to exemplify the at least one

second barrier rib formed along a cross-section inside of a seal line in order to prevent sealant of the seal line from penetrating into the inside of the first unit plasma display panel, wherein the second barrier rib is extended to the edge of a plurality of first barrier ribs and formed perpendicular to the edge. Due to its dependency upon independent claim 1, claim 3 is also allowable.

5. Regarding independent claim 5, the prior art of record neither shows or suggests a multi-typed plasma display panel comprising, in addition to other limitations of the claim, at least one second barrier rib formed along a cross-section inside of a seal line in order to prevent sealant of the seal line from penetrating into the inside of the first unit plasma display panel, wherein the second barrier rib is formed between the outermost barrier rib which is adjacent to the cross-section in plurality of first barrier ribs and the seal line of the cross-section; and a sealant is filled in a space between the second barrier rib and the outermost barrier rib.

6. The closest prior art of Nakano (US 6,414,434) to independent claim 5 teaches, in Figure 1, plasma display panel with a front substrate (1); a rear substrate (3) sealed with the front substrate; a plurality of first barrier ribs (6) formed on the rear substrate, the plurality of first barrier ribs dividing a display area (9) into display cells (7); and at least one second barrier rib (11). However, Nakano fails to exemplify the at least one second barrier rib formed along a cross-section inside of a seal line in order to prevent sealant of the seal line from penetrating into the inside of the first unit plasma display panel, wherein the second barrier rib is formed between the outermost barrier rib which is adjacent to the cross-section in plurality of first barrier ribs and the seal line of the

cross-section; and a sealant is filled in a space between the second barrier rib and the outermost barrier rib.

7. Regarding independent claim 6, the prior art of record neither shows or suggests a multi-typed plasma display panel comprising, in addition to other limitations of the claim, at least one second barrier rib formed along a cross-section inside of a seal line in order to prevent sealant of the seal line from penetrating into the inside of the first unit plasma display panel, wherein the second barrier rib is formed between the outermost barrier rib which is adjacent to the cross-section in plurality of first barrier ribs and the seal line of the cross-section; and a dielectric surface of the rear substrate is removed as much as an area separated at a predetermined distance from the cross-section where the seal line is formed in the glass exposure condition.

8. The closest prior art of Nakano (US 6,414,434) to independent claim 6 teaches, in Figure 1, plasma display panel with a front substrate (1); a rear substrate (3) sealed with the front substrate; a plurality of first barrier ribs (6) formed on the rear substrate, the plurality of first barrier ribs dividing a display area (9) into display cells (7); and at least one second barrier rib (11). However, Nakano fails to exemplify the at least one second barrier rib formed along a cross-section inside of a seal line in order to prevent sealant of the seal line from penetrating into the inside of the first unit plasma display panel, wherein the second barrier rib is formed between the outermost barrier rib which is adjacent to the cross-section in plurality of first barrier ribs and the seal line of the cross-section; and a dielectric surface of the rear substrate is removed as much as an area separated at a predetermined distance from the cross-section where the seal line

Art Unit: 2889

is formed in the glass exposure condition. Due to its dependency upon independent claim 6, claim 7 is also allowable.

9. The subject barrier rib structures described earlier are provided for preventing internal penetration of a seal line into the display area. The design is new and unique to the art.

10. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
